ABSTRACT

Theses are one of the information sources that users are not aware of their existence talk less of having access to them. Bibliographies helps researchers keep track of the sources they consulted or cited for their written material and gives readers a framework of how the writers' arguments were formed. This paper attempts to provide a systematic list of Ph.D theses produced by the Faculty of Science, Bayero University, Kano from 2004 to 2014. Aim was to enable the researchers and students to know and access the scientific research products of the Faculty of Science Bayero University, Kano Nigeria. The theses were arranged alphabetically under the author surname followed by the title of the work, institutional affiliation and then the year of publication respectively.

Keywords: Bibliography, Ph.D., Theses.

INTRODUCTION

The word Bibliography came from Greek word "Bibliographia" which means "Book writing". In the field of library and information science the concept of bibliography refers to the systematic list of books and other information carried medium arranged or consulted by an author. Bibliography according to Kent, (2013) is the logical arrangement of books, audio-visual and other researchable publications organized for easy identification, access and use. Bibliography is sometimes called work cited or work consulted, the primary purpose of bibliography is to enhance accessibility and use of recorded knowledge this is because before researchable work can be studied they must be known to exist. This is especially important when publications are designed to serve the needs of groups rather than individual. Bibliographical compilation is often used to guide researchers/information seekers on the publication available on a particular area of concerned.

From a learning perspective, bibliography according to Adelman, (2000) aids the researcher in developing a strong standpoint during the early stages. Bibliographical compilation encourages researchers to

perform in-depth readings of all sources, compare different viewpoints and formulate opinions for a thesis. In scholarly settings, published bibliographies give fellow researchers a starting point for their own work and an outline of the writers' thought process. For example, when a paper seems to leave out leading viewpoints on a particular topic, readers can consult the bibliography to find out if the author consulted those sources. A full bibliography also lets others know whether the writer performed extensive research or only looked at a few references. Scientific researches are recognized as the only way through which scientists demonstrates and explains findings on nature. Scientific discovery and findings often used to be communicated through scientifically designated journals. This paper provides a comprehensive list of Ph.D theses produced by the following Departments/Programmes at the Faculty of Science: Applied and Plant Biology, Micro-Biology, Zoology, Biochemistry, Physics, Chemistry and Mathematics, all from Bayero University, Kano. The author used APA style in arranging the entries for easy identification, access and use.
