

**STOMACH CONTENTS OF A
SPECIMEN OF *PROTELES
CRISTATUS* FROM ANGOLA
(CARNIVORA: PROTELIDAE)**

W R J DEAN

*Transvaal Nature Conservation Division, Barber-
span Ornithological Research Station, P O Barber-
span 2765.*

Accepted: January 1978

On 4 May 1973 an adult male aardwolf *Proteles cristatus* was found dead on the road about 20 km north of Sá da Bandeira, Angola (at about 14° 50' S/13° 35' E). The skin and skull were deposited in the Alexander McGregor Memorial Museum, Kimberley, Cape (Collectors No. 276a). The stomach contents of this specimen are detailed in Table 1. The habitat where the specimen was obtained was degraded *Brachystegia* woodland.

TABLE I

Stomach contents of *Proteles cristatus*.

Order	Family	Species	No. of individuals
Isoptera	Termitidae	<i>Fulleritermes contractus</i> (Sjöstedt)	13 401
		<i>Pseudacanthotermes militarius</i> (Hagen)	338
		<i>Odontotermes okahandjae</i> Fuller	709
Hymenoptera	Formicidae	Unidentified	2
Small amounts of leaf fragments, grass and sand.			

ACKNOWLEDGEMENTS

I thank John Bissett for the analysis of the stomach contents and Ian Sinclair for preparing the skin and skull.
