ABSTRACT. New isonicotinohydrazone compounds, N’-(3-bromobenzylidene)isonicotinohydrazide (1) and N’-(2,3-difluorobenzylidene)isonicotinohydrazide (2), were prepared and structurally characterized by elemental analysis, IR, UV and ¹H NMR spectra, and single crystal X-ray determination. Compound 1 crystallizes in the monoclinic space group P2₁/n with unit cell dimensions a = 7.600(2) Å, b = 11.365(2) Å, c = 14.412(2) Å, β = 101.748(2)º, V = 1218.7(4) Å³, Z = 4, R₁ = 0.0335, and wR₂ = 0.0745. Compound 2 crystallizes in the triclinic space group P-1 with unit cell dimensions a = 7.6241(6) Å, b = 11.3937(9) Å, c = 14.335(1) Å, α = 79.664(1)º, β = 75.990(1)º, γ = 71.159(1)º, V = 1136.3(2) Å³, Z = 4, R₁ = 0.0345, and wR₂ = 0.0940. Structures of both compounds are stabilized by hydrogen bonds and π···π interactions.

KEY WORDS: Isonicotinohydrazone, Crystal structure, Hydrogen bonds, X-ray diffraction

INTRODUCTION

Isonicotinohydrazide is a well known anti-tuberculosis drug. It can react with aldehydes to form isonicotinohydrazone, which show interesting biological activities [1-4]. Moreover, isonicotinohydrazone compounds usually possess three or more donor atoms, which can readily form complexes with various metal atoms [5-12]. Recently, we found that halido-substituted hydrazones have potential antimicrobial activities [13]. Study on the synthesis and structures of such compounds are important for medicinal chemistry. In the present work, two new isonicotinohydrazone compounds, N’-(3-bromobenzylidene)isonicotinohydrazide (1) and N’-(2,3-difluorobenzylidene)isonicotinohydrazide (2), were prepared and structurally characterized.

EXPERIMENTAL

Materials and measurements

Starting materials, reagents and solvents were purchased from commercial suppliers and used as received. Elemental analyses were performed on a Perkin-Elmer 240 C elemental analyzer. IR spectra were recorded on a Jasco FT/IR-4000 spectrometer as KBr pellets in the 4000–400 cm⁻¹ region. UV spectra were recorded on a Lambda 900 spectrometer. ¹H NMR and ¹³C NMR data were recorded on a Bruker 300MHz and 75 MHz instrument. HRMS data was obtained with ESI (electrospray ionization) mode.
Synthesis of N’-(3-bromobenzylidene)isonicotinohydrazide

(I). 3-Bromobenzaldehyde (1.0 mmol, 0.185 g) andisonicotinohydrazide (1.0 mmol, 0.137 g) were mixed in methanol, and stirred at room temperature for 1 h. The solvent was evaporated by distillation to give colorless solid, which was washed with methanol. Yield: 87%. Single crystals of the compound suitable for X-ray diffraction were obtained by recrystallization of the product in methanol. Anal. calcd. for C_{13}H_{16}BrN_{2}O: C, 51.3; H, 3.3; N, 13.8; found: C, 51.5; H, 3.3; N, 13.7%. HRMS (ESI): m/z calcd for C_{13}H_{16}BrN_{2}O [M + H]^+ 305.0762; found: 305.0765. IR data (KBr, cm⁻¹): 3197 (w), 1682 (s), 1620 (m), 1546 (s), 1411 (w), 1349 (w), 1268 (s), 126 (w), 1216 (w), 1136 (w), 1062 (w), 946 (w), 847 (w), 787 (w), 745 (w), 682 (m), 635 (w). UV (λ, ε): λ 300 nm, 1.07 × 10^4 L mol⁻¹ cm⁻¹. ¹H NMR (300 MHz, d₆-DMSO): δ 12.31 (s, 1H, NH), 8.85 (d, 2H, py-H), 8.46 (s, 1H, CH=N), 8.0-7.4 (m, 6H, ArH). ¹³C NMR (75 MHz, d₆-DMSO): δ 161.5, 151.5, 151.3, 146.3, 140.0, 134.5, 132.3, 131.9, 130.2, 128.7, 122.5, 121.6, 121.5.

Synthesis of N’-(2,3-difluorobenzylidene)isonicotinohydrazide

(2). 2,3-Difluorobenzaldehyde (1.0 mmol, 0.142 g) and isonicotinohydrazide (1.0 mmol, 0.137 g) were mixed in methanol, and stirred at room temperature for 1 h. The solvent was evaporated by distillation to give colorless solid, which was washed with methanol. Yield: 95%. Single crystals of the compound suitable for X-ray diffraction were obtained by recrystallization of the product in methanol. Anal. calcd. for C_{13}H_{16}F_{2}N_{2}O: C, 59.8; H, 3.5; N, 16.1; found: C, 60.0; H, 3.4; N, 15.9%. HRMS (ESI): m/z calcd for C_{13}H_{16}F_{2}N_{2}O [M + H]^+ 262.0786; found: 262.0780. IR data (KBr, cm⁻¹): 3190 (w), 1687 (s), 1618 (w), 1555 (s), 1480 (s), 1406 (m), 1288 (s), 1208 (w), 1141 (w), 1089 (w), 1062 (w), 995 (m), 853 (w), 786 (w), 683 (w), 658 (w). UV (λ, ε): λ 300 nm, 2.20 × 10⁴ L mol⁻¹ cm⁻¹. ¹H NMR (300 MHz, d₆-DMSO): δ 12.27 (s, 1H, NH), 8.81 (d, 2H, py-H), 8.70 (s, 1H, CH=N), 7.9-7.3 (m, 5H, ArH). ¹³C NMR (75 MHz, d₆-DMSO): δ 161.7, 151.6, 151.5, 150.4, 148.4, 148.2, 140.7, 125.3, 125.2, 121.6, 121.5, 118.9, 118.7.

Data collection, structural determination and refinement

Diffraction intensities for the compounds were collected at 298(2) K using a Bruker D8 VENTURE PHOTON diffractometer with MoKα radiation (λ = 0.71073 Å). The collected data were reduced using the SAINT program [14], and multi-scan absorption corrections were performed using the SADABS program [15]. The structures were solved by direct methods and refined against F² by full-matrix least-squares methods using the SHELXTL [16]. All of the non-hydrogen atoms were refined anisotropically. The amino H atoms were located in difference Fourier maps and refined isotropically with N–H distances restrained to 0.90(1) Å. All other H atoms were placed in idealized positions and constrained to ride on their parent atoms. The crystallographic data for the compounds are summarized in Table 1. Hydrogen bonding information is given in Table 2.

Crystal structures of hydrazone compounds derived from isonicotinohydrazide

### RESULTS AND DISCUSSION

#### Chemistry

Compounds 1 and 2 were readily synthesized by reaction of 1:1 molar ratio of isonicotinohydrazide with 3-bromobenzaldehyde and 2,3-dichlorobenzaldehyde, respectively, in methanol at room temperature, with high yields (over 90%) and purity (Scheme 1). Single crystals suitable for X-ray diffraction were obtained by slow evaporation of the methanol solutions containing the compounds in air. The compounds have been characterized by various physico-chemical methods. Structures of the compounds were further confirmed by single crystal X-ray crystallography.

*Results and Discussion*
Structure description of the compounds

Figures 1 and 2 give perspective views of compounds 1 and 2, respectively, with atomic labeling systems. X-ray crystallography reveals that the molecules of the compounds adopt E configuration with respect to the methylidene units. The distances of the C7-N1 bonds in both compounds, and the C20-N4 bond in 2, ranging from 1.26 to 1.27 Å, confirm them as typical double bonds. The shorter distances of the C–N bonds and the longer distances of the C=O bonds for the –C(O)–NH– units than usual, suggests the presence of conjugation effects in the molecules. The remaining bond lengths in the compounds are comparable to each other, and within normal values [17, 18]. The dihedral angles between the benzene and pyridine rings are 5.3(3)° for 1, and 4.9(3)° and 1.1(3)° for 2. The crystal structures of the compounds are stabilized by hydrogen bonds and π···π interactions (Table 3, Figures 3 and 4).

Spectra description

In the FT-IR spectra of the compounds, the vibrations of the hydrogen-bonded NH protons are shown as sharp and weak bands at 3197 and 3190 cm⁻¹. The intense bands at 1682 cm⁻¹ for 1 and 1687 cm⁻¹ for 2 are generated by ν(C=O) vibrations, whereas the bands at 1620 cm⁻¹ for 1 and 1618 cm⁻¹ for 2 are generated by the ν(C=N) vibrations.

UV spectra of the compounds are shown in Figure 5. Both compounds have single bands centered at 300 nm, which can be assigned to the π→π* transitions.

The ¹H and ¹³C NMR of the compounds were run in d₆-DMSO. In the ¹H NMR spectra of the compounds, the singlet at about 12.3 ppm can be attributed to the proton of the –NH groups. The protons of the azomethine groups are shown at 8.46 and 8.70 ppm as a singlet for 1 and 2, respectively. The multiplets in the 8.0–7.3 ppm range can be assignable to the protons of the benzene rings. The doublet peaks in the 8.9–8.8 ppm range can be assignable to the protons of the pyridine rings. In the spectra of the ¹³C NMR, the resonances at 162 ppm may be assigned to the carbon atoms of the CH=N groups. The aromatic carbon atoms are shown in the 118–152 ppm range.

CONCLUSION

Two isonicotinohydrazone compounds \( N'-(3\text{-bromobenzylidene})\text{isonicotinohydrazide} \) and \( N'-(2,3\text{-difluorobenzylidene})\text{isonicotinohydrazide} \) were prepared and structurally characterized. The crystal structures of the compounds are detailed described. Structures of both compounds are stabilized by hydrogen bonds and \( \pi \cdots \pi \) interactions.
