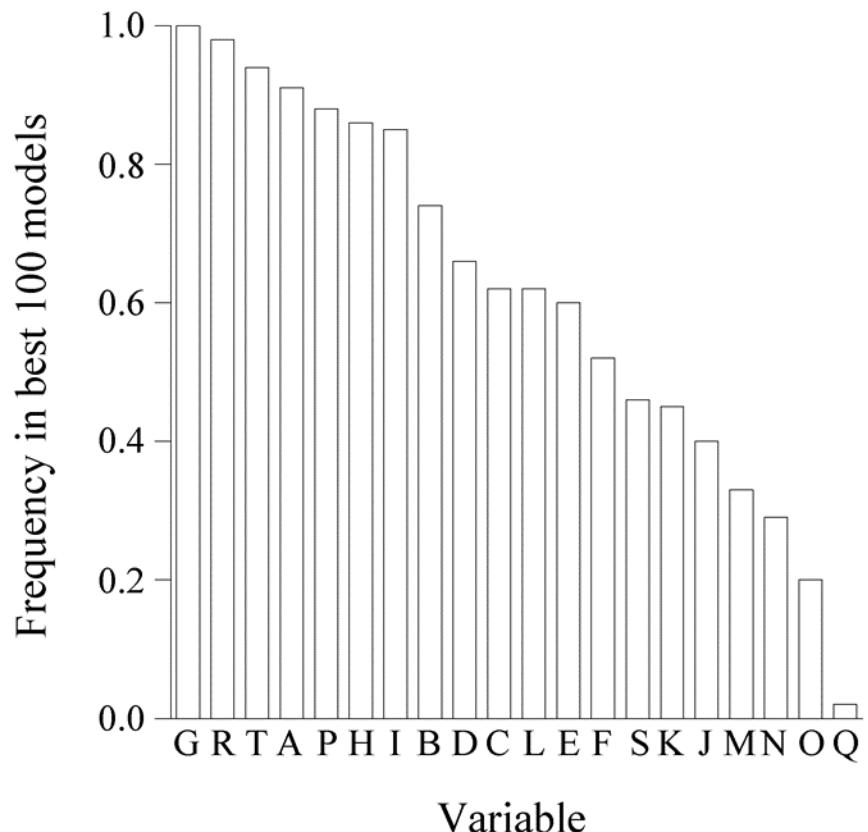

Figure 1: The frequency of the 20 variables (A–T) for the best 100 subset models.

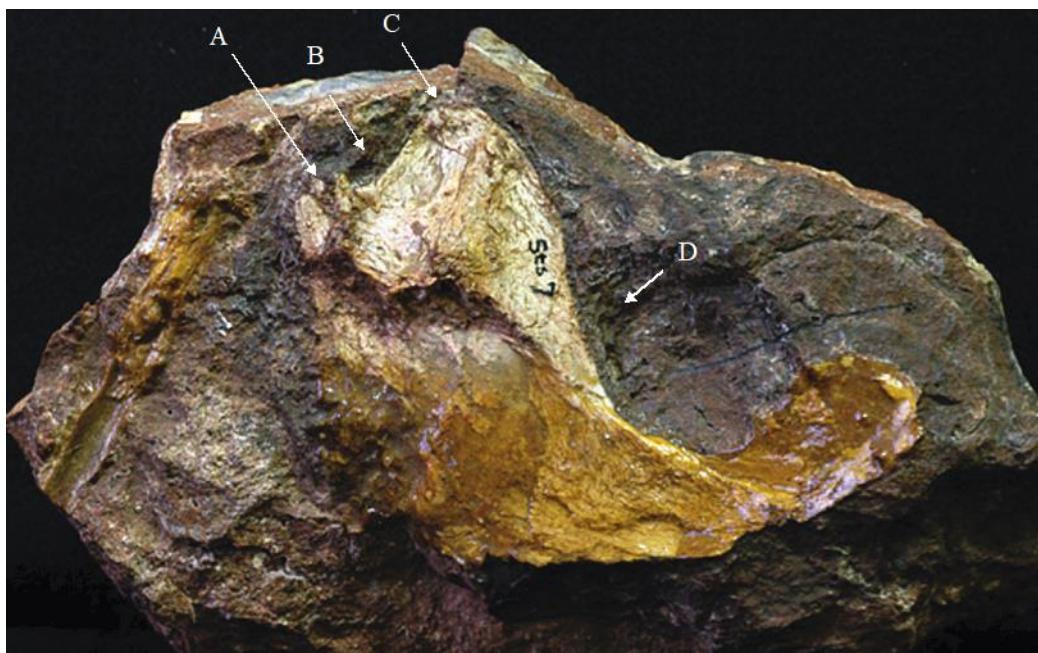

Figure 2: Specimen Sts 7 embedded in the original block of breccia (not shown to scale). A, condylar process; B, deepest point of the mandibular notch; C, coronoid process; D, sloping anterior margin of the ramus (there is barely any preangular notch). Note that the mandibular notch is confined and the coronoid process is broad.
